

Chip Basket Retrofit

Technology Improvement for MART Parts Washer

The Chip Basket Retrofit works with any MART Parts Washer having an internal reservoir cover. Chip baskets are available in steel or stainless steel and offer a significant improvement in filtration and rubbish control over the standard OEM expanded metal grates.

Advantages:

- Catches nuts, bolts, washers, gaskets, paper or anything else that falls off the wash load during the cleaning cycle so it does not end up in the wash solution
- Small diameter pore prevents chips and loose paint from entering reservoir. Maximizes time between clean-outs, shortens clean out time and increases bath life.
- Acts as primary filter to prevent clogging of main pump suction filter and damage to the pump.
- Easy lift out no fastener construction for dumping debris.
- Reduces frequency of cleaning main suction filter.
- Easy to install on all existing machines with an internal reservoir cover. Simple 1x1x1/8 angle iron provides frame for the chip basket to rest.
