

## MART Power Washer Operator Training Video:

Master the fundamentals of MART Power Washer technology. This DVD training program is designed to train the new operator who has little or no experience with a MART Power Washer. The video lessons are designed to demonstrate basic MART Power Washer operations and maintenance. Each chapter is packed with the information that a MART machine operator needs to know to be highly effective.

### **Contents:**

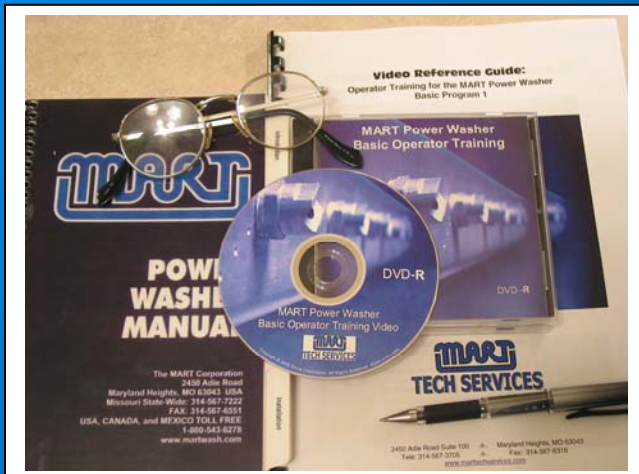

- Chapter 1: Overview and Theory of Operation
- Chapter 2: How the Power Washer Works, explanations of all key operator controls
- Chapter 3: Safety and the Standard Cleaning Cycle
- Chapter 4: Chemicals purpose, maintenance and how to add safely
- Chapter 5: Daily Operator Maintenance, Learn the 4 MUST do items
- Chapter 6: Additional Information, resources for help and additional learning.

### **Operator Reference Guide**

The video is accompanied by a reference guide designed to match the content and sequence of the video instruction. The guide can be used by learners to enhance their understanding and provides permanent information from the training video that they can take with them. The Reference Guide restates fundamental points and key information for each chapter, reinforcing the information and improving retention.

### **Why you should have this program!**

- For less than half the price of a service call you can have your operators maximizing the productivity of your machine investment.
- Protects your investment: Operators learn the proper way to operate and maintain the machine for long productive life.
- Save hundreds of dollars in travel going to a training class with the convenience of watching it over and over (at your own speed)
- Cleaner parts. Operators that know the correct loading and operation of the machine will maximize the MART technology resulting in cleaner parts.
- Save thousands in downtime. A properly maintained machine has fewer repairs and operates when you need it instead of breaking down at random.
- Saves money by quickly getting new operators properly trained so they can use the equipment with little or no supervision and be highly productive.
