

OIL SKIMMER – Disc Type - 18 inch diameter with Heated Trough

Designed, Engineered and Manufactured by MART for exclusive installation on Power Washers

- Industrial Grade System with non-warping Stainless Steel Disc and replaceable stainless steel Wiper Blades. Sealed-for-life Pillow block Bearings on both sides of Disc ensure stability and extended service life without periodic adjustments.
- Housed in epoxy coated rigid steel frame with sloped floor to prevent sludge buildup, and return oil and solution to Reservoir.
- Entire Skimmer assembly easily removable for cleanout and servicing.
- Fractional horsepower Gear Motor drive is totally enclosed non-ventilated (TENV) high temperature style designed to operate in hot steamy environment for reliability and long service life.
- Heated Discharge Trough and heated Wiper blades ensure that viscous oil and grease discharge into pail for disposal without spilling over sides of Trough onto shop floor.
- Programmable 7-Day Clock can operate during non-washing periods when emulsified oils have split and risen to the surface, defoamant has returned to the solution, and solution temperature is reduced to promote maximum skimming.
- Manual Override Switch is Panel-mounted and operator controlled to bypass automatic mode for non-programmed operating times.
- Standard unheated Deep Trough System available for lighter oils.
